

Firewall Systems

Reliable Storage for Firewall Resilience

Firewall systems demand reliable DRAM modules to efficiently store and process incoming and outgoing data in real-time. Transcend's DRAM modules are designed to meet these needs, offering a wide range of memory capacities (8GB to 64GB), form factors, and memory types (DDR5/DDR4) with speeds ranging from 2666 to 5600 MT/s. Whether your firewall system requires high performance or flexible compatibility, Transcend's DRAM modules deliver exceptional reliability and superior performance. Choose Transcend to enhance the efficiency and security of your systems.

Low Latency

Handle sensitive data with minimal delay.

Good Thermal Management

Sustainable performance under 0°C~95°C and -40°C~95°C to withstand heat caused by non-stop operations.

ECC Support

Detect and correct bit errors to avoid system crashes and data corruption.
